Please read carefully before starting operation! 1. Should any damage occur due to disregard of the following instructions 2. Installation: В the guarantee expires and the manufacturer is free from any obligations. Installation of the device must be carried out with care The device can only be employed under operations parameters in order to prevent damaging of bearing and packing. Any use of not exceeding the nominal capacity of the clutch or brake. force impairs the function. The borehole present should be lightly Maximum torque and highest permissible power loss must be stictly smeared with a rust proofing grease. The system being lubricated observed. The available voltage must correspond to the operation for life, any other lubrication with oil or grease is not admitted С voltage indicated on the identification plate. When a clutch of the as it would impair the performance of the device. E(R)AT ... -Type is used, the distance between the brush holders and the slide ring must correspond to the measure indicated 3. Starting operation: on the table of dimensions. Clutches and brakes should be taken into operation by means If a brake is used, there is no slide ring and the connection is of short current pulses to allow proper distribution of the macnetic effectuated directly on the coil. Thereupon it must be checked particles. Thereupon the rotor speed correspond to the use required. that no body contact takes place. 4. Dismounting, Repairs: If a clutch or a brake is operated in an extremely dustladen place (soot, wood chip, paper or cement dust) a dust cover should be provided. Instructions for repair are supplied on request free of obligation. In such a case an additional fan should allow reliable Upon disassembly of clutches and brakes any shock by knocks and shoves dissipation of the heat developped. must be prevented. When removing the rotor a brace can be used. Ε Storage: Clutches and brakes must be stored in a dry place and protected against corrosion. The device can only be stored in its welded plastic hull containing moisture absorbing chips.

Repair instructions: Clutches Brakes FAT 10001 331 220 00 FAT 10 001 331 200 00 FRAT 10001 331 230 00 FRAT 10001 331 210 00 FRATO 10001 331 240 00 "R" = heat sink FRATO 10001 R 331 250 00 "O" = watercooling В Important note! The magnetic particle clutch / brake should be disassembled in the following order: The magnetic powder must be poured into the air gap / space between the internal rotor and the external rotor During assembly, refer to the sectional drawing. (not into the hollow space in which the field coil is located). Be sure to use only the amount and particle size of magnetic powder approved for the particular type of clutch / brake. 1. To disassemble, place the clutch / brake on a workbench with the slipring or coil connectors up. Disconnect the The old magnetic powder must not be re-used. С slipring from the coil, and remove the screws to lift the slipring from the housing. Then replace the internal rotor with the housing cover and screw it down. 2. Loosen the screws on the bearing shell to remove the Secure the slipring assembly and make the connections bearing shell together with the internal rotor. with the coil. The housing with the coil is now accessible. Following assembly, place the clutch/ brake in its fitting position i.e. with its hollow shaft horizontal. 3. After removing the circlip ring from the ball bearing, D lift the ball bearing and seals from the bearing shell. Push the internal rotor into the hollow shaft revolving at low speed while tapping on the rotor. This distributes the magnetic powder evenly in the air gap. 4. Clean the inner side of the housing and the internal rotor carefully of magnetic powder. This distributes the magnetic powder evenly in the air gap. 5. Fit the new seals and ball bearings in the bearing shell *) Only available as complete repair kit Spare parts: and fix them on the bearing cover using the circlip ring. Before that, slide the seals (V ring) on the hollow shaft Pcs Type 10001 Bestell- Nr of the internal rotor. Push the internal rotor into the 331 200 06 Internal rotor ball bearing of a bearing shell and fix it in position 331 200 14 Field coil 24VDC using a circlip ring. 314 310 60 Brush holder assy. Slip rina 314 201 40 6. Housings fitted with heat sink, e.g. Type ERAT ... FRAT... Ersatz fuer:

In order to avoid magnetic leakage flux and to achieve a good heat removal,

non-ferrous metals should be used for installation or attachment of
auxiliary components (not for drive shaft).
